

Fabrication and Characterization of Zn Substituted Cu-Cr Ferrites

Filesize: 3.52 MB

Reviews

This pdf is fantastic. It typically is not going to price too much. You will not truly feel monotony at at any time of your own time (that's what catalogs are for about if you request me).

(Leslie Reinger)

FABRICATION AND CHARACTERIZATION OF ZN SUBSTITUTED CU-CR FERRITES

LAP Lambert Academic Publishing Dez 2015, 2015. Taschenbuch. Book Condition: Neu. 220x150x5 mm. This item is printed on demand - Print on Demand Neuware - This research project is aimed to fabricate and characterize zinc substituted copper chromium spinel ferrites of compositional scheme of $\text{Zn}_x\text{Cu}_{1-x}\text{Cr}_{0.5}\text{Fe}_{1.5}\text{O}_4$ (Where $x=0, 0.2, 0.4, 0.6, 0.8$) prepared by powder metallurgical methods using 99.99% commercially available ZnO , CuO , Cr_2O_3 and Fe_2O_3 as starting material. Accurately weigh powder were ball milled and calcined for 24 hours at 1100°C . Then the calcined powders were homogenized using A-gate motor- pestle then sintered at 900°C for 10hours. Thermal, structural, morphological, elemental, magnetic, optical and dielectric properties were carried out using TGA-DTA, XRD, FESEM, EDS, VSM, FTIR and LCR meter respectively. TGA-DTA data provides the optimum temperature for the fabrication of spinel ferrites and later XRD micrographs reveal the formation of single phase spinel structure showing lattice parameters increases and x-ray and bulk density decreases as Zn content increases. FESEM shows the aggregated grain growth. FTIR spectra show two prominent bands in the range of $400\text{-}800\text{ cm}^{-1}$ which confirm the formation of spinel ferrites. The dielectric loss tangent and dielectric constant (ϵ) decreases as frequency increases. 76 pp. Englisch.
