BIOPHYSICAL LABELING METHODS

Cambridge University Press. Hardcover. Book Condition: New. Hardcover. 320 pages. Dimensions: 9.0in. x 6.2in. x 0.9in. This monograph describes the theoretical bases and experimental prerequisites for methods such as spin fluorescence, triplet, Mossbauer, photochromic and electron-density labeling, including the procedures used to obtain specifically modified proteins, enzymes, biomembranes, nucleic acids, and other biological molecules. The fundamentals of the physical theory behind each technique is explained and details are given of how to interpret the experimental data obtained. Special sections deal with...

Reviews

It is great and fantastic. I have go through and i am sure that i will likely to study again once again later on. I am just easily could possibly get a enjoyment of looking at a published book.

-- **Tad Stanton Sr.**

I actually started reading this article ebook. I actually have read and i also am certain that i will likely to go through once again again in the future. You are going to like just how the article writer compose this ebook.

-- **Mariane Kerluke**

This written book is great. I am quite late in start reading this one, but better then never. You will not really feel monotony at at any moment of your time (that's what catalogues are for about when you check with me).
