Pub Date :2010-11-01 Pages: 96 Publisher: Shanghai Popular Science Press sheet: a goal of improving child health is not only to protect the survival of life continues. and also include improving the quality of life. Higher survival rate. has made considerable progress in recent years due to perinatal medicine. making high-risk children and how to improve the survival of high-risk child's life quality has become a major issue in the pediatrics field. Neuropsychiatric developmental disorder is the most common disease in high-risk child survival issues. has become the leading issue of great concern at home and abroad for the early detection and early intervention of high-risk children's neurodevelopment. Children with cerebral palsy is one of the important diseases after the survival of high-risk children showed physically handicapped. more than 600 million of our existing patients with cerebral palsy. an annual increase of about 4 million children. brought a heavy burden to the society and the family. Rehabilitation of children with cerebral palsy effect depend on the availability of early diagnosis. early differential diagnosis of cerebral palsy is quite difficult. at present. China is still a lack of reliable clinical assessment method. the book summarizes the whole body motion estimation technology to fill the areas blank. Aspirational book involving new research progress and creativity. on the basis of summing up the experience of foreign counterparts. the localization of body movement assessment techniques. combined with China's national conditions and validation studies. By body movement further motor development follow-up assessment used in high-risk children. proved this method for the early evaluation of cerebral palsy. developmental outcomes of high-risk children and early rehabilitation intervention work has clear practical value. reliability and sensitivity comply...
