Excerpt: . . . 4, Plate 1, it will be seen that the rectiline would vary from the water level in ever-increasing angles from the beginning to the end of the line. If the earth were convex, the line at the end of 4 miles would be higher than at the beginning, and the angles would be divergent from the beginning; if concave, convergent from the beginning. We used levels for two purposes: First, to level the first section; second, to ascertain and record the variation of the sections from the water horizontal at given points along the coast. By reference to the Comprehensive View of the Air Line, the reader will understand how the plumb-line should hang with reference to the right-angled bars first, if the earth were convex; second, if it were flat; and third, on the basis of the concavity. The leveling of the first section was the point for the exercise and application of the greatest skill and accuracy; the first section must be accurately leveled! For this purpose we applied one of the finest and most sensitive spirit levels obtainable. In connection with this we had our 12foot Mercurial Geodetic Level, invented by the writer, especially for this survey. Being 12 feet in length, it was susceptible of being used with great accuracy and precision. Applied to the first section, the spirit and mercurial levels agreed. The plumb was also applied to the cross-arms of the first section, as additional corroboration. The horizon was...
