

Bulletin Volume 7, Nos. 35-36 (Paperback)

By New York State Museum of History

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1900 edition. Excerpt: .IST. Y., advocated the following method for testing the resistance of paving brick to abrasion. A rattler o f the usual type has the staves fitted with two longitudinal pockets each, in which the bricks are inserted and held end to end. These pockets are 3 inches deep, leaving about one inch of brick protruding. When all the staves are in place, the interior of the rattler is virtually solid brick lined. During rotation the attack of the abrading material is at right angles to the length of the brick, and confined to the surfaces and edges which are exposed in actual use; there is sufficient space between the brick for the escape of any dust or waste, and incidentally allowing the abrading material free access to the unsupported edges of the brick under test, thus establishing the conditions of position and line of wear...
