HOLOGRAM (PAPERBACK)

Createspace, United States, 2014. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book. There is a growing concept within the scientific community that the World we live in is a hologram . Many scientists are seriously considering the possibility that the entire Universe was designed by a computer program, suggested in 1967 by Konrad Zuse, who built the World s first computer between 1935 and 1941. His Calculating Space discusses a lone computer computing all particle interactions. Albert Einstein described reality as an illusion. We think the World is solid when in reality, it is comprised of vibrational, electrical, chemical, electromagnetic, and digital information. A hard concept to embrace and many of us resist. Other physicists support this theory. Some have gone further and suggested the most incredible concept yet. What if we re actually more likely to be artificial intelligences trapped in a fake Universe than organic minds in the real one? Although we may think we are physical beings moving through a physical World, this too may be an illusion. We may really be receivers floating through a kaleidoscopic sea of frequency, and what we extract from this sea and transmogrify into physical reality is but one channel from many extracted out of the super hologram . We ourselves may be holograms. This striking new picture of reality, has come to be called the Holographic Paradigm , and although many scientists are skeptical, it has galvanized others. A small growing group of researchers believe it may be the most accurate model of reality science has arrived at thus far. Once you realize that the energies of life are fluid and can be moved about, the false perception of limitation becomes diluted. However, it s obvious that the Holographic Paradigm isn t readily acceptable...
